

AW TRAILERS

Nursery Tank

The AW Nursery Tank has a 10 stud commercial hydraulic lifting axle which enables the tank to be lowered flat on to the ground when in position. Standard features include inspection steps, hatches, hydraulic brakes and full road lighting. The standard model has a cubic capacity of 14,000 gallons.

Access ladders, internal bracing and empty / fill pipework is fitted as standard. The tanks are shotblasted then painted with 2 pack primer and 2 pack top coat to give a hardwearing finish. The interior can be painted with an anti-corrosive coating as an optional extra.

The axle is hydraulically lifted, lowered and locked into position. 385/65R22.5 'super single' tyres are fitted as standard but wider tyres are available.

6" gate valves can be supplied as required.

Sight gauges can be fitted either as an external pipe or as a built in window.

Other options such as aeration pipework, beacons, worklights and a float system to alert when full are available and we are happy to discuss your requirements with you so that we can design and manufacture a Nursery Tank that suits you.
